## EXTRUSION, ANODISING AND POWDER COAT STANDARDS

All aluminium sections are extruded to AS 1866-1997, anodized to GB 5237.2:2008 or powder coated to GB 5237.5:2008.

## DETERMINATION OF BURNING BEHAVIOUR USING A RADIANT HEAT SOURCE

### Mean Critical Radiant Flux (MCRF) tested to AS 9239.1.2003

BCA C1.10 2012, Table 2 lists the maximum CRF for Floor Covering Materials in different building types, (with and without a E1.5 sprinklers) and in Fire-Isolated Exits and Fire Control Rooms. BBS aluminium sections show CRF of 12.9kW/m<sup>2</sup>. BBS Luminous Contrasting Strips show a CRF of 8kW/m<sup>2</sup>.

**Both measures meet the standard in all building types.**

### Mean Smoke Development Rate (MSDR) tested to AS 9239.1.2003

BCA C1.10 2012, 3 (b) determines a maximum MSDR of 750%-minutes in buildings not protected by a E1.5 sprinkler. BBS aluminium sections show a MSDR of 2%-minutes. BBS Luminous Contrasting Strips show a MSDR of 410%-minutes. **Both measures meet the standard in all building types.**

**Refer to BCA C1.10 2012 for detailed requirements.**

## ACCESS AND MOBILITY STANDARDS

Mobility and Access Standards for stairnosings and transition strips in a continuous accessible path of travel are governed by **AS 1428.1:2009, Design for Access and Mobility.**

**Refer to these standards for detailed requirements.**

**The Disabilities (Access to Premise-Buildings) Stds Act of 2010** references AS 1428.1:2009 and names the types of buildings, persons and actions to which the Standards apply.

## SLIP RATINGS

### AS 4586:2013, Slip Resistance Classification of New Pedestrian Surface

Materials governs slip ratings for pedestrian surfaces.

**SA HB 198:2014** defines the tests for Floorcovering Materials:

- Wet Pendulum Test (App. A) in most locations (P0-P5).
- Oil-Wet Inclining Platform (App. D) for oil contaminated areas (R9-R13).

**The minimum classifications deemed-to-satisfy building applications in the National Construction Code are:**

APPLICATION	DRY CONDITIONS	WET CONDITIONS
Ramp steeper than 1:14	P4 or R11	P5 or R12
Ramp steeper than 1:20 but not steeper than 1:14	P3 or R10	P4 or R11
Tread or landing surface	P3 or R10	P4 or R11
Nosing or landing edge strip	P3	P4

**The minimum classifications for applications where the National Construction Code does not stipulate Slip Resistance are considered to be:**

LOCATION	WET PENDULUM	OIL-WET INCLINING PLATFORM
<b>External Pavements and Ramps</b>		
External ramps including sloping driveways, footpaths etc. steeper than 1:14	P5	R12
External ramps including sloping driveways, footpaths etc., under 1:14	P4	R11
External sales areas, carparks, colonnades, walkways, pedestrian crossings	P4	R11
External balconies, verandas, carports, driveways, courtyards and roof decks	P4	R11
Undercover car parks	P3	R10
